COIS, DANIEL, LA SOUS-TRAITANCE, PILLIER DE L'INDUSTRIE MODERNE (*Cooperation, a Pillar of Modern Industry*) "Usine Nouvelle" (France), Supplement June 1967, pp. 41—48.

Starting from the most frequent methods and principles for organizing co-operation in industry, and stressing the special position of the supplying enterprises, the author shows that in view of improving co-operation the following objectives should be achieved: facilitating contacts between supplying and user enterprises by means of collective actions such as the editing of directories, improving the position of suppliers, a better knowledge of the cost price, keeping the delivery terms and improving the system of information in such a manner that the user enterprise should know what the possibilities of the suppliers are with respect to their technological capacity in relation with time. A committee of co-operation has been constituted under the Federation of Machine Building Enterprises of France, in view of improving the relations of co-operation.
