КОДИРОВАНИЕ ИНФОРМАЦИИ В АВТОМАТИЗИРОВАННОЙ СИСТЕМЕ УПРАВЛЕНИЯ ПРОМЫШЛЕННЫМ ПРЕДПРИЯТИЕМ

(Information Coding in the Conditions of the Automatized System of Enterprise Management)

"Mekanizatsiya i avtomatizatsiya upravlenyia" (U.S.S.R.), No. 5, Sept.-Oct. 1957, pp. 14—16, 2 fig.

The coding and classifying scheme of the materials, as well as the model of the codes used are given in this paper. This model is used to compute the materials required for the production programme, the stocks of materials and the control of their use.

The paper analyzes the main methodologic aspects in the elaboration of the system of coding the information used in conditions of automatized management for industrial enterprises. In the "materials" sector, this system consists in the following working stages: accurate determination of information sources (technologic cards, material flow cards, reports regarding use of materials, etc.); classifying of materials by groups (basic materials, auxiliary, spare parts, fuel, etc.) and, within groups, by standard sizes; coding of each group in part.
