BETRIEBSWIRTSCHAFTLICHE ASPEKTE DER ELEKTRONISCHEN DATENVERARBEITUNG

(Economic Aspects of Electronic Data Processing in Enterprises)

"Bürotechnik Organisation" (Federal Republic of Germany) 15, No. 8, Aug. 1967, pp. 669—674, 1 fig.

The introduction of data processing electronic equipment in enterprises requires an analysis to be made of various aspects in their economy and organization: efficiency of investments, minimum cost of an operation carried out, changes in the organization of the enterprise, determined by the introduction of the system, minimum requirement of personnel, possibility of extending the system, etc. The paper shows

that in the stage of preparation, the existing situation is analyzed, a provisional project of the new organization is elaborated and the volume of the data to be processed is determined. One of the following solutions is then chosen: the purchase of an installation, the outside processing of the data, the use of such an installation in common with other enterprises.
