DETERMINING MANUAL LABOUR BY PRODUCT IN TEXTILE ENTERPRISES

(Determinarea manoperei pe produs în întreprinderile textile)

"Probleme de organizare a muncii şi de salarizare" (Romania), No. 12, Dec. 1967, pp. 535—544.

In this paper the authors elaborate the unitary methodology of computation by product, containing the following elements: planning work productivity in natural units, by departments, shops and sectors; planning labour by departments, shops and sectors; planning wage fund corresponding to production tasks; planning manual labour by product.

The unitary methodology of computation by product is given, containing the following quarterly and monthly operations: 1. Allotment of production plan by departments, shops and sectors. 2. Establishing the level of fulfilment of the working norms for piece work and of hourly physical productivity. 3. Evidence of the utilization of the working time fund. 4. Required number of auxiliary and service workers. Examples of the mode in which the respective plan indicators are computed.
