CHOICE OF ELECTRONIC EQUIPMENT FOR MANAGEMENT

(Du choix d'un équipement électronique de gestion)

"Annuaire des Sciences Economiques Appliquées" (Belgium),
No. 4, Oct. 1967, pp. 417—435.

Since the problems to be solved by means of the electronic equipment evoluate, material liable to be easily modified during utilization should be chosen.

In view of purchasing or of modifying electronic equipment for management, the user must decide who effects the study on the best-suited material. There are three possible solutions: 1. to entrust the study to a specialized organization, of the organizing office type; 2. to entrust the study to the manufacturer and to limit the role of the user to the final decision; 3. to have the study effected by the user, in collaboration with the manufacturer. The first solution is costly, the second is cheap, but it lacks the guarantee of integrity, the third has the advantage of offering the greatest number of guarantees. The paper shows two concrete cases where the studies made have pointed to the best-suited equipment.
