DISPATCHER SERVICE IN FARM ENTERPRISES

(Диспечерская служба в хозяйстве)

"Ekonomicheskaia Gazeta" (U.S.S.R), No. 47, Nov. 1967, pp. 23—27

The organizatory structure of management with the help of dispatchers is described for a large experimental farm belonging to the farm equipment testing stations in the Caucasus. This structure comprises: the chief dispatcher, the dispatcher for the technical exploitation of the machine and tractor stock, the informing dispatcher and the operators. The chief dispatcher is the assistant of the farm manager in problems concerning the operative control of the development of the production process and he is directly subordinated to the manager. The dispatcher for the technical exploitation of the machine and tractor stock is the direct assistant of the chief dispatcher and is responsible to him for the operational management of the works effected with farm machines and for the increase of their employment coefficient. The dispatcher deals with the control of the progress of the planned work and with the collection and transmitting of the data to the dispatcher point.
