BRITAIN'S FIRST ELECTRONIC TELEPRINTER

"Business Equipment Digest" (England), No. 10, Oct. 1967, pp. 20—23, 2 figs.

The "Envoy Electronic Data" teleprinter, used as a marginal unit of electronic computers and as an apparatus for transmitting texts through the telephone network, is described.

Uses: direct "on-line" transmission, with any computer, of written information to any distance and "off-line" for elaborating, interpreting, duplicating and even multiplying 8-channel punched tapes, with control and correcting devices of tape recordings.

It is a construction with integrated electronic circuits, displaying the respective advantages: high reliability in operation, simple maintenance and high flexibility.

The teleprinter is completed by various annexed marginal units, forming a network with many punching stations and tape readers.
