IMPROVING THE SYSTEM OF ECONOMIC INFORMATION IN BUILDING ENTERPRISES

(Imbunătăţirea sistemului de informare economică în întreprinderile de construcţii)

Probleme economice (Romania), No. 11, 1969

The author starts from the necessity to improve the knowledge of technical economic processes in order to forecast and make optimal decisions. Accordingly, he examines the state of technical-economic information in building enterprises. Original suggestions are put forward on these grounds, as to: the rationalization of organizational structures so as to improve the information system; the necessary phases in the process of studying and improving the information system; the main directions to be taken by future research work, etc.
