Valee, J. F:

MANAGEMENT LANGUAGES AND RATIONAL INTRODUCTION OF FILING CARD SYSTEMS

(*Les langages de gestion et l'implantation rationnelle des fichiers*)

"Revue française d'informatique et de recherche operationelle" (France), No. 9, 1968

The author calls attention to the possibility of using third generation electronic computers in automatizing documentation. After reviewing some problems connected with the organization of documentary index files on electronic memory, he analyzes specialized languages enabling access to electronic type documentary files. He further points out the required operations in creating index files, in validating information, in interrogating, updating and correcting the index files, and gives several examples concerning the use of the INFOL specialized language.
