IMPROVING OUTPUT PLANNING IN LIGHT INDUSTRY

(Perfecţionarea planificării producţiei în industria uşoară)

Probleme economice (Romania), No. 4, 1969.

Starting from the necessity of removing present shortcomings generated by maintaining a large number of indicators in the plan of light industry enterprises, the author suggests certain measures regarding the maximum reduction of physical positions in plan,while establishing the ones maintained in the form of limits — minimum and maximum — ; renouncing nominalization in the yearly plan of the ministry concerning new assortments of consumer goods; planning footwear production by means of a single physical indicator — the standard assortment — ; in a more remote period, quite taking out of the ministry plan all physical positions, permitting them to be established by direct agreement between the industrial central offices and the enterprises dependent on them, on the one hand, and the beneficiary enterprises, on the other hand.
