ELEMENTS OF DYNAMIC ANALYSIS FOR R & D. POTENTIAL FORECASTING ON NATIONAL AND MULTINATIONAL LEVELS

L. G. Baworowski, Forecasting Research Centre, Wroclaw Technical University, Wybrzeże S. Wyspiańskiego 27, 50—370 Wroclaw, (Poland)

In the 20th century science is more and more a factor in the growth of productivity. Decision-making in firms and corporations, as well on national and multinational level, has its starting point in scientific researches. And so mission-or goal-oriented scientific researches are basic elements of decision

on various levels. Our intention is to examine all problems which are appeared on a cybernetic model that can be approximately used in diverse situations and levels for systems than quide processes of scientific researches or R. D. activities.

This paper then describes a scientific research system with some emphasis on the problem of forecasting.
