A MODEL OF THE EFFECT OF THE RESEARCH DEVELOPMENT AND EDUCATION ON THE ECONOMIC DEVELOPMENT

M. Petrescu, Polytechnic Institute, N. Costake, Computing Centre of the Central Statistical Board, Bucharest, (Romania)

The paper analyses the effect of the efforts made in the fields of research, development and education on the process of economic growth. The mathematical models chosen by the authors have been processed on computer in order to establish the quantitative relationship between the process of growth and the efforts in the field of research and education.
