DATENVERARBEITUNG FÜR STUDENTEN DER WIRTSCHAFTS UND SOZIALWISSENSCHAFTEN

(Data processing for students in Economic and Social Sciences)

Copyright IBM Deutschland, 1970, 170 pg.

After an introduction in data-processing problems and in FORTRAN programming language, the second part of the book presents in all particulars 12 exercises in the IBM 1130 Basic FORTRAN IV language, e.g.: arithmetic mean computation, linear correlation and regression, matrix calculus, gross wages computation.

For each exercise the logical diagram, the FORTRAN language program and the result obtained by the 1130 system, are presented.
