ON SOME ECONOMETRIC PROCEDURES USED IN A MODEL OF MULTISECTORIAL ECONOMIC GROWTH

V. Mierlea, H. Bejan, G. Pop and. M Puşcaşu, State Planning Committee, Bucharest, (Romania)

The economic-mathematical model of multisectorial economic growth, for which econometric procedures were determined that are the subject of this paper, is based on W. Leontief's input-output model, linear in parts as well as dynamic. Three econometric procedures are described.
