EVOLUTIONS AND STABILITIES

G. Ceălugăriţei, National Institute of Gerontology and Geriatries, Bucharest, (Romania)

Within the framework of evolutions and stabilities there are elementary and complex types, general and particular types, and principal and secondary types; fundamental and particular stages; also orders of generations and hierarchic orders, etc.

There are evolutions of the evolutions (hierarchic orders of evolutions-metaevolutions) and stabilities of evolutions (stabilities of the ensembles of the fundamental characteristics of evolutions, of an "inferior" hierarchic order following upon evolutions of a "superior" hierarchic order).

Similarly, there are stabilities of stabilities (hierarchic orders of stabilities) and evolutions of stabilities (transitions from certain types of stability to other types of stability).
