MIXED ALGORITHMS FOR NONLINEAR OPTIMIZATION

V. Dumitru, S. Moga, R. Şerban and F. Luban, Dept. of Economic Cybernetics, Academy of Economic Studies, Bucharest, (Romania)

The problem of optimizing nonlinear economic models is closely related to time. One technique to shorten the time for obtaining a solution is to combine different algorithms and to use them. Using the results obtained in studying the efficiency of some well known algorithms for nonlinear optimization, the authors are analysing different possibilities for efficiently combining mixed algorithms. Special attentation is given to conjugate direction Newton mixed type algorithms.
