A BREAK – THROUGH SYSTEMS THEORY IN THE LITERATURE STUDY: THE TYPOLOGY OF NOVELS

Aurora Niculescu Mizil, Polytechnic Institute, Bucharest, (Romania)

Systems theory has found a large variety of applications. However, by applying the concepts and methods from systems theory a large field of investigation is open to the literature study.

The paper presents a framework approach of studying the typology of novels by using a systems methodology. An extensive analysis has been particularly applied to the novels of Julio Cortázar, a South American writer. The results obtained have proved the validity of the investigation and are opening a new outlook in formalizing an integrative effort for studying the literature work by means of computers and systemic thought.
