MANAGEMENT CYBERNETIC SYSTEM AT A MICROECONOMIC LEVEL

P. Constantineseu and E. Rădăceanu, Ştefan Gheorghiu Academy, Bucharest, (Romania)

In the paper is defined a cybernetic informatic system for the management of an industrial entreprise as a model of the couple "management-managed object".

One describes the "prefabricates", which have to be used as components of a typological project of MIS, the typological project becoming an efficient tool for designing, and the main part of the methodology for designing and implementing management information systems. From this point of view we have to pay special attention to two subsystems (general management and operative management) of the MIS in the strategy of implementation.
