THE CONCEPT OF A DATA BASE FOR PLANNING

V. Pescaru, I. Catona and V. Dumitrescu, State Planning Committee, Bucharest, (Romania)

This paper presents a data base for planning the stages forecast for its implementation, the present stage of implementation, as well as the present and future technical means necesary for data base operation. The data base is expected to be a modular design implemented in plan sections that allow a simultaneous operation in conversational and batch processing models.
